SYLLABI FOR MASTER OF ENGINEERING IN CHEMICAL ENGINEERING EXAMINATIONS 2023-2025

be divided into FOUR Units having TWO questions each and candidate is required to attempt at least ONE question from each Unit. The duration of End Term exam will be 3 hrs.

UNIT-I

Review of Fundamental Concepts of Mole Balances Continuity equation, conservation of mass, steady state, unsteady state, batch, continuous, semi-batch, recycle

Conversion and Reactor Sizing Conversion, yield, selectivity, reaction order, rate of reaction, residence time, reactor volume, design equation

Rate Laws and Stoichiometry Rate laws, reaction order, stoichiometry, yield, selectivity, reaction rate, conversion, equilibrium, equilibrium constant

Isothermal Reactor Design Design equations for CSTR, PFR, batch reactor, design of reactors in series, recycle

Collection and Analysis of Rate Data Methods for determining rate laws, differential method, integral method, graphical method, non-linear regression, error analysis, confidence intervals

Multiple Reactions Reaction network, rate laws, selectivity, yield, conversion, maximum yield, optimization, reactor design for multiple reactions

UNIT-II

Catalysis and Catalytic Reactions Catalytic cycle, reaction mechanism, activation energy, rate of reaction, catalyst deactivation, poisoning, regeneration

Diffusion and Reaction in Porous Catalysts Molecular diffusion, Knudsen diffusion, surface reaction, Thiele modulus, effectiveness factor, Weisz-Prater number, Thiele modulus

UNIT-III

Non-Isothermal Reactor Design Energy balance, heat transfer, temperature profiles, adiabatic, isothermal, non-isothermal, CSTR, PFR, batch reactor, design of reactors with heat transfer

Reactors for Catalytic Reactions Design of reactors for catalytic reactions, CSTR, PFR, batch reactor, design of reactors with heat transfer, optimization, reactor selection

**SYLLABI FOR MASTER OF ENGINEERING IN CHEMICAL ENGINEERING
EXAMINATIONS 2023-2025**

Paper Title: TRANSPORT PHENOMENA (Theory)

Paper Code : CHE 1.5

Max. Marks 50 Credits : 4

Time: 3 hours

Note for the Paper setter: Question No. 1, which is compulsory, will cover the entire syllabus, having ten conceptual questions of one mark each or five questions of two marks each. Rest of the Questions (2 to 9) will be divided into FOUR Units having TWO questions each and candidate is required to attempt at least ONE question from each Unit. The duration of End Term exam will be 3 hrs.

Unit I: Introduction to Transport Phenomena. Mass, momentum and energy balances. Continuum mechanics. Dimensional analysis. Similarity. Kinematics of fluid flow. Velocity profiles. Poiseuille flow. Couette flow. Boundary layer flow. Free surface flow. Motion of particles in a fluid. Stokes flow. Drag and lift forces. Dimensionless groups.

Unit II: Kinematics of fluid flow. Velocity profiles. Poiseuille flow. Couette flow. Boundary layer flow. Free surface flow. Motion of particles in a fluid. Stokes flow. Drag and lift forces. Dimensionless groups.

Unit III: Kinetics of fluid flow. Velocity profiles. Poiseuille flow. Couette flow. Boundary layer flow. Free surface flow. Motion of particles in a fluid. Stokes flow. Drag and lift forces. Dimensionless groups.

Unit IV: Kinetics of fluid flow. Velocity profiles. Poiseuille flow. Couette flow. Boundary layer flow. Free surface flow. Motion of particles in a fluid. Stokes flow. Drag and lift forces. Dimensionless groups.

Differential Equations of fluid flow

UNIT-II

Flow of non-viscous flows

Bernoulli's equation and its application

Laminar flow of viscous fluids

Velocity profile in a pipe and in a channel, shear stress distribution, Hagen-Poiseuille equation, Darcy-Weisbach equation, friction factor, equivalent pipe diameter, flow in non-circular conduits

UNIT-III

Turbulent flow of viscous fluids

Velocity profile in a pipe, friction factor, Darcy-Weisbach equation, equivalent pipe diameter, flow in non-circular conduits

PROCESS DYNAMICS AND CONTROL

Paper Code : CHE 2.4 Max. Marks 50 Credits : 4 Time: 3 hours

Course Duration: 45 Lectures of one hour each.

Note for the Paper setter: Question No. 1, which is compulsory, will cover

**SYLLABI FOR MASTER OF ENGINEERING IN CHEMICAL ENGINEERING
EXAMINATIONS 2023-2025**

Multivariable Control: Introduction to multivariable control systems, state space representation, decoupling, and control design.

Feedback control systems with large dead time: Analysis and design of control systems with large dead time, Smith predictor, and other advanced techniques.

UNIT-IV

Root Locus Technique: Analysis and design of control systems using the root locus method, including asymptotic approximation and compensation techniques.

Model based control: Introduction to model based control, state space methods, and digital control design.

Digital control: Introduction to digital control, sampling, and digital filter design.

Title	PROJECT MANAGEMENT			Credits	1
Max.Marks	End term 50	Mid-term 50	Practical --	Elective	N
Pre requisites					

Course Objectives

The course is designed to provide the students with a comprehensive understanding of the project management process, from the initial planning and budgeting to the final evaluation and reporting. The course covers the following topics:

- 1. Project Management: Definition, Importance, and Role of a Project Manager.
- 2. Project Planning: Identifying the Project, Defining the Scope, and Developing a Project Charter.
- 3. Project Organization: Establishing a Project Team, Assigning Roles and Responsibilities, and Developing a Project Organization Chart.
- 4. Project Scheduling: Identifying the Activities, Estimating the Duration of Activities, and Developing a Project Network Diagram.
- 5. Project Budgeting: Estimating the Costs of Activities, Allocating Resources, and Developing a Project Budget.
- 6. Project Monitoring and Control: Tracking the Progress of the Project, Identifying Risks, and Taking corrective actions.
- 7. Project Closure: Evaluating the Project Performance, Documenting the Project Lessons Learned, and Closing the Project.

After completing this course, the students will be able to:

SYLLABI FOR MASTER OF ENGINEERING IN CHEMICAL ENGINEERING EXAMINATIONS 2023-2025

Production of polyethylene and Modelling of process reactions in a reactor. In this Module, the student will learn the concepts of reaction kinetics, reaction engineering, and the design of reactors. The student will also learn the concepts of reaction engineering and the design of reactors.

Learning Objectives: On completion of this module, the student will be able to: 1. Understand the concepts of reaction kinetics, reaction engineering, and the design of reactors. 2. Apply the concepts of reaction kinetics, reaction engineering, and the design of reactors to solve problems.

Unit III

Production of ethylene oxide and Modelling of process reactions in a reactor. In this Module, the student will learn the concepts of reaction kinetics, reaction engineering, and the design of reactors. The student will also learn the concepts of reaction engineering and the design of reactors.

Books Recommended:

1. Fogler, H.S. *Elements of Chemical Reaction Engineering*, Wiley, New York, 1999. McQuarrie, R.A. *Chemical Kinetics*, McGraw-Hill, New York, 1967.

2. Aris, R. *Elementary Chemical Reaction Engineering*, Prentice-Hall, New York, 1975. McQuarrie, R.A. *Chemical Kinetics*, McGraw-Hill, New York, 1967.

3. Fogler, H.S. *Elements of Chemical Reaction Engineering*, Wiley, New York, 1999. McQuarrie, R.A. *Chemical Kinetics*, McGraw-Hill, New York, 1967.

SAFETY & HAZARDS

Note for the Paper setter: Question No. 1, which is compulsory, will cover the entire syllabus, having ten conceptual questions of one mark each or five questions of two marks each. Rest of the Questions (2 to 9) will be divided into FOUR Units having TWO questions each

SYLLABI FOR MASTER OF ENGINEERING IN CHEMICAL ENGINEERING EXAMINATIONS 2023-2025

5. Safety for Chemical Engineers : A.I.Ch.E Publications, 1976-77

Course Objectives: This course aims to equip students with the knowledge and skills to identify workplace hazards, assess risks, implement effective hazard controls, and promote safety in various industries. Students will understand toxic chemicals, handle mechanical and electrical hazards, prevent fires, manage explosive and flammable substances, and respond to emergencies. Additionally, they will learn about Indian safety legislation and analyze case studies to improve workplace safety practices.

Course Outcomes:

At the end of the syllabus the students will be able to understand:

1. Identify Hazards and Assess Risks: Students can recognize workplace hazards and conduct risk assessments for potential harm.
2. Implement Hazard Controls: Students apply various measures to mitigate hazards and promote safety.
3. Respond to Emergencies: Students effectively respond to workplace emergencies and adhere to safety protocols.
4. Comply with Safety Standards: Students understand safety regulations, codes, and legislation, fostering a safety-conscious culture.

COMPOSITE MATERIALS

Note for the Paper setter: Question No. 1, which is compulsory, will cover the entire syllabus, having ten conceptual questions of one mark each or five questions of two marks each. Rest of the Questions (2 to 9) will be divided into FOUR Units having TWO questions each and candidate is required to attempt at least ONE question from each Unit. The duration of End Term exam will be 3 hrs.

Unit I

Introduction to composite materials, classification of composites, properties of composites, manufacturing of composites, applications of composites.

Unit III

Advanced topics in composite materials, recent developments, case studies, and research trends.
